

BlackBoard Insight

Behnam Ardakanian

Advisor: Todd Gibson

Spring 2023

California State
University **Chico**

Overview:

BlackBoard Insight is a python application that uses web scrapping to calculate and show the grade percentage for a class on BlackBoard. The purpose of the application is to help students know where they stand in the class without having to ask the professor during the semester.

Challenges:

Locating the right variables in the html file
Variables not aligning with other variables due to graded section created by professor
Some assignments did not have total points causing the code to break

Features:

Points - calculates all the points in the class to produce grade percentage
Weighted - produces percentages for weighted category, with student input it can calculate weighted grade percentage
Advanced Weighted - Has Proportional/Equally calculation for each weighted category including future calculation
Final Grade - Helps student to know what to get on the final for wanted grade percentage in class
Semester GPA - Helps student to know what their semester GPA is
Application background can be changed to dark or light mode or be changed by system settings
